

Product Change Notice

E-Disk[®] SCSI Standard Firmware 3B24

PCN-MK-001-00
December 1, 2005

Overview

Effective December 1, 2005, all E-Disk[®] SCSI products will be shipping with a new standard firmware version 3B24. This version replaces the current firmware version 3D21.

The following is a summary of changes and/or enhancements:

- Enhanced securErase[®] to support industry-standard Sanitize methods
- Software erase to continue even when power is interrupted
- Added support for 32 LUNs on Inquiry Command per SCSI-3 Specifications
- Added the option for PG (PowerGuard[®]) enabled E-Disks to keep the cache enabled during FUA, Write Verify and Write Commands
- Improved parity checking during the Command Phase

Affected Products:

3.5" E-Disk [®] SCSI	Models 3S5, 3S10, 3S20, 3S40
2.5" E-Disk [®] SCSI	Models 2S5, 2S10, 2S20

Additional Information
